# **PREFACE**

Diabetes Literature Index is a publication of the National Institute of Arthritis, Metabolism, and Digestive Diseases which has been prepared from MEDLARS (Medical Literature Analysis and Retrieval System) tapes furnished by the National Library of Medicine. This specialized information medium is being published to fill an existing great need in the field of diabetes and to assist the Institute in meeting its obligations to foster and support laboratory and clinical research into the nature, causes, and therapy for diabetes. Publication of Diabetes Literature Index makes available an index of all current scientific papers relevant to this field from the world literature.

It is hoped that the issuing of *Diabetes Literature Index* under the auspices of the National Institute of Arthritis, Metabolism, and Digestive Diseases will provide a much needed current awareness tool to scientists and will facilitate greater integration of research and clinical efforts in this field. *Diabetes Literature Index* has been published monthly since January 1966 and is cumulated at the end of each calendar year.

This publication is available free to National Institutes of Health grantees and contractors working in the field of diabetes, and libraries of medical schools. Requests from these *qualified* individuals to receive free copies of this publication must include their grant or contract number and the title of their project. These requests as well as address changes and other communications from these qualified recipients of free copies should be addressed to:

Scientific Communications Office Diabetes Literature Index National Institute of Arthritis, Metabolism, and Digestive Diseases Building 31, Room 9A-03 Bethesda, Maryland 20014

Other individuals and other libraries may receive this publication by subscribing directly to the Superintendent of Documents. Subscription price per year in the United States, Canada, and Mexico, \$21.50 (cumulative index issue not included; will be on sale, price to be determined later); foreign, \$5.50 additional; and \$2.00 for a single copy. Payment is required in advance, and check or money order should be made payable to the Superintendent of Documents. Address changes for subscribers should also be sent directly to:

Superintendent of Documents U.S. Government Printing Office Washington, D.C. 20402

The Secretary of the Department of Health, Education, and Welfare has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through April 30, 1975.

# EDITORIAL NOTE

Diabetes Literature Index, a publication of the National Institute of Arthritis, Metabolism, and Digestive Diseases (NIAMDD), was brought about through the cooperative efforts of two divisions of the National Institutes of Health (NIAMDD and the National Library of Medicine), a professional society (American Diabetes Association), three Universities (University of Minnesota, University of Rochester, and Case Western Reserve University) as well as a number of individual scientists. In this rather unique cooperative project, initiated in 1958, duplication of effort has been reduced to a minimum. The digital information generated from the original input of bibliographic citations to the National Library of Medicine's MEDLARS system is processed by computer in several different ways and ultimately used to compose the final printed pages of this Diabetes Literature Index.

Each month the MEDLARS magnetic tape furnished by the National Library of Medicine (NLM) is used for identification of the diabetes related literature. All bibliographic citations classified under subject headings which we have designated as Priority I, represent articles that are 100% diabetes-related; they are automatically copied onto a new magnetic tape and constitute over seventy percent of the citations appearing in this index. The citations appearing under Priority II and III are subject headings which include both diabetes-related and unrelated articles; these are printed on cards by the computer. The diabetes related citations are identified manually and the corresponding digital information is added to the next month's Priority I magnetic tape.

In the selection of this bibliography, diabetesrelated literature has been defined in a rather arbitrary but broad, comprehensive manner with a view toward providing the widest possible coverage of related areas. To this end the following subjects have been included: the Islets of Langerhans in the pancreas, including their structure and pathologic alterations; insulin, its properties, assay, synthesis, release or degradation; the direct and indirect effects of insulin on target organs; blood glucose level, hyper- and hypo-glycemia; insulin antibodies and insulin resistance; insulin allergy; recent developments in intermediary metabolism; experimetal and clinical aspects of diabetes, signs, symptoms, diagnosis, treatment, complications, and associated conditions. Also included are other hormones and agents whose effects are similar, opposite, synergistic or antagonistic to insulin, either in their primary or secondary effects on target organs. It should be noted that there are undoubtedly some omissions due to the empirical definition of the diabetes-related literature which was adopted and also-to the difficulties attendant in preparing such a large-scale bibliography by machine.

The Diabetes Literature Index is published in three formats: a hierarchical subject index, a key word in title index, and an author index. The magnetic tape version of these indexes, prepared at the University of Minnesota, is used to generate the copy for offset printing by the Government Printing Office on their Linotron.

Hierarchical Subject Index: This index differs from Index Medicus in that related terms are grouped together in a hierarchical relationship. Thus, all citations which are indexed under blood sugar, glucose tolerance, hyperglycemia, hypoglycemia, and glycosuria are grouped under the general heading "blood sugar, urine sugar and related topics." In both the Diabetes Key Word Index and in Index Medicus these terms are arranged alphabetically, and the corresponding citations are distributed at many different page locations. In some instances where only a few citations appear under several similar subject headings, these are grouped together under a more generic term; at times, a new non-MEDLARS index term is created to cover these groupings of subject headings. In some instances where many citations appear under a single subject heading, these are subdivided by using subheadings.

Although the hierarchical subject index is, in a sense, a miniaturized version of *Index Medicus* (dealing with the core diabetes literature) it provides a much greater depth of indexing. Many relevant citations included in the *Diabetes Literature Index* do not appear under the corresponding subject headings in *Index Medicus*; because of space limitations, only two or three of the ten or more index terms included on the MEDLARS magnetic tape are used in the printed version of *Index Medicus*. At times the reason why a given citation appears under a specific subject

heading may not be apparent from the article title. However, examination of the list of index terms for this citation (included in the Author Index under the principal author) will give the basis for this inclusion.

Beginning with the January 1971 issue, two sections are included in the Hierarchical Subject Index. In Section 1, "Diabetes Mellitus and Related Topics," the major subdivisions include the MEDLARS terms: Islets of Langerhans, Pancreas, Insulin, Glucagon, Blood and Urine Sugar; the subsection on "Diabetes," (Section 1.F) is extensively subdivided and many subheadings are used. In Section 2, "Endocrinology" is divided into subsections dealing with the individual endocrine glands. Hierarchical subject indexes related to Biochemistry and the organ systems (included in the experimental issues, published in February and March, 1969) are not included at this time; terms related to these subjects are, however, included in the Keyword Index.

A list of the subject headings included in the tree structure of the hierarchy (with their corresponding index numbers) and an alphabetic cross index of these subject headings is printed immediately preceding the Hierarchical Subject Index.

Key Word Index: For all of the diabetes-related literature chosen, key words in the title are identified by the computer and an expanded magnetic tape is prepared, listing the complete bibliographic citation under each key word. Most editorial decisions are made by the computer-disk-look-up-program using a master list of terms. Trivial words are deleted and specific word combinations are also selected. Abbreviations and word variant forms are replaced by the more commonly used key word. Inconsistencies between the British and American spellings are eliminated. In no case, however, is a change made within

the title itself. Words which have not appeared previously in the system are identified by the computer program and flagged for human decision.

With the publication of the hierarchical subject index, the key word index has been shortened. Diabetes is not included as a term in the key word index as it is covered in great detail in the hierarchical subject index. Although users may find the hierarchical subject index more useful for coverage of their broad interests, the key word index is advantageous in locating citations dealing with very specific terms—for example those relating to biochemistry or the organ systems. The key word index is of special value in locating citations dealing with the frontiers of diabetes research, for new terms appearing in the title are immediately included in the key word index.

Author Index: Because of space limitations, the printed version of Index Medicus excludes all but the first three authors in multiple author publications. However since the last author is often the best known, this name may be the most useful for reference or retrieval; therefore, all authors are included in the Diabetes Literature Author Index. These are automatically identified by the computer program and an alphabetized magnetic tape is prepared in which the complete bibliographic citation is included under each author. In addition, all of the index terms used by the NLM for each citation are listed under the principal author, thus providing an overview of the subject content of the article.

Users planning to systematically cover all articles appearing in a given month may do so by scanning the author index, limiting their perusal to the principal author, i.e., those citations which contain the MEDLARS index terms.

### TRIGLYCERIDE

EFFECT OF FENFLURAMINE ON THE IN-TESTINAL ABSORPTION TRIGLYCENTED S. Bizzi A., Veneroni E., Garattini S. Eur J. Pharmacol 23:131-6, Aug 73 (Eng)

[TRIGLYCERIDES--INTERPRETATION OF THE TEST RESULTS| Fukui I, Sone A, Kushiro H, Masaki K, Takahata J Jap J Clin Med 31:1335-49, 1973 (Jap) TRIGLYCERIDE AND FREE FATTY ACID CLEARANCES IN PATIENTS RECEIVING COMPLETE PARENTERAL NUTRITION USING A TEN PER CENT SOYBEAN OIL EMULSION. MacFadyen BV Jr, Dudrick SJ, Tagudar EP, Maynard AT, Law DK, Rhoads JE Surg Gynecol Obstet 137:813-5, Nov 73 (Eng)

#### TRIGLYCERIDE, MEDIUM CHAIN

METABOLIC EFFECTS IN LAMBS IN-TRAVENOUSLY INFUSED WITH XYLITOL, MEDIUM CHAIN TRIGLYCERIDES, AND CORN OIL. Eskeland B, Pfander WH J Dairy Sci 56:1340-3. Oct 73 (Eng)

## TRIGLYCERIDE, PLASMA

CATABOLISM OF CHOLESTEROL IN HYPERCHOLESTEROLEMIA AND ITS RELATIONSHIP TO PLASMA TRIGLYCERIDES. Sodhi HS, Kudchodkar BJ Clin Chim Acta 46:161-71, 28 Jun 73 (Eng)

MODERATE ETHANOL INGESTION AND PLASMA TRIGLYCERIDE LEVELS. A STUDY IN NORMAL AND HYPERTRIGLYCE-RIDEMIC PERSONS. Ginsberg H, Olefsky J, Farquhar JW, Reaven GM Ann Intern Med 80:143-9, Feb 74 (Eng)

### TRIGLYCERIDE SYNTHESIS

PATHWAYS OF TRIGLYCERIDE SYNTHESIS BY BOVINE JEJUNUM DURING LIPID AB-SORPTION. Skrdlant HB, Young JW, Allen RS, McGilliard AD J Dairy Sci 56:1305-11, Oct 73 (Eng)

#### TRYPSIN

TREATMENT OF ISOLATED FAT CELLS WITH TRYPSIN INHIBITS THE EFFECTS OF INSULIN ON INCORPORATION OF LEUCINE INTO PROTEIN. Sakai T, Lavis VR, Williams RH Diabetologia 9:422-5, Oct 73 (Eng)

### TRYPSIN INHIBITOR

EFFECTS ON EXOCRINE AND ENDOCRINE RAT PANCREATIC FUNCTIONS OF BOVINE LUNG TRYPSIN INHIBITOR AD-MINISTERED PERORALLY. Arnesjo B, lbse 1, Lundquist 1, Ovist 1 Scand J Gastroenterol 8:545-54, 1973 (Eng)

### TRYPTOPHAN EFFECT

EFFECT OF TRYPTOPHAN ON FATTY ACID SYNTHESIS IN RAT LIVER. Sakurai T, Miyazawa S, Hashimoto T Febs Lett 36:96-8, 1 Oct 73 (Eng)

## TUBERCULOSIS, MENINGEAL
